

# Gratopia - Known Issues & Bug Fixes

This book contains known issues and bug fixes on Gratopia. (Do not abuse these bugs)

- [Can't Link Discord Account](#)
- [Bedrock and Teams](#)
- [Unable To Accept Team Invites](#)
- [Spawners Reset Their Storage](#)
- [Unable To Apply Custom Enchants](#)

# Can't Link Discord Account

This is in regard to our in-game `/rewards` and `/link` commands.

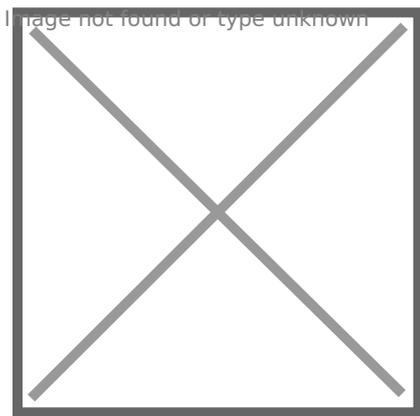

If you were able to link your Discord account and claim your rewards without any issues before, but now you're unable to claim them, I'm aware of your situation. I'm not sure what's causing the problem, but I've already reached out to the developer to see if they can address and fix it.

# Bedrock and Teams

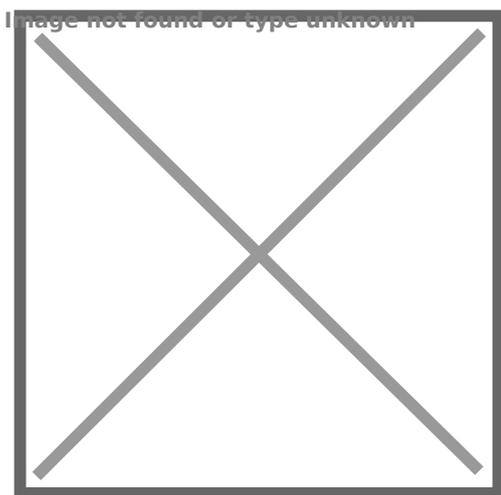

This is in regard to our in-game `/team` command.

You, likely a Bedrock player, are experiencing an issue. This arises from some Velocity settings that prevent the server from sending certain packets related to confirmation menus, such as creating or leaving.

This is what you are likely seeing:

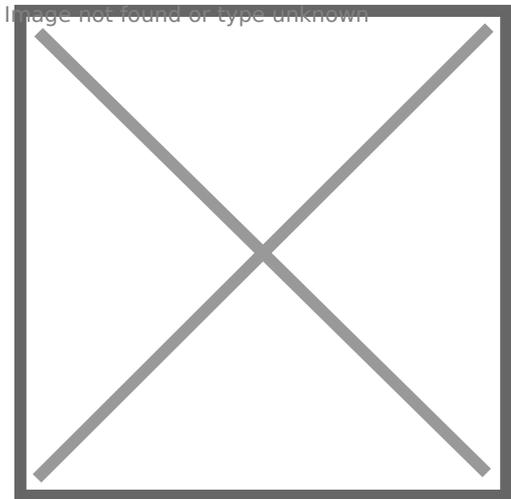

This is what you're supposed to be seeing:

# Unable To Accept Team Invites

This is in regard to our in-game /team command.

When you accept a team invite with a command, remember to input the team leader's name, not the team's name. If someone needs assistance, advise them to type /team and check their mailbox for the invite.

# Spawners Reset Their Storage

This is a well known bug by the developer of the plugin and we are still waiting for a fix for our custom fork. They just updated it recently. For now, just know we are working towards a fix.

# Unable To Apply Custom Enchants

Bedrock players cannot apply custom enchants. This is due to a bedrock limitation of the anvil not recognizing the book as an enchant. Bedrock players will have to have a Java player apply the enchant for them.
